

Guide 1: Regenerating the Vault with the Wallet Descriptor

Necessary items:

- Wallet Descriptor
- Wallet Management Interface
- Internet-connected device (phone or computer)

The Wallet Descriptor is present in the ORANGE envelope, in each Recovery Package.

The Wallet Management Interface app can be downloaded on your computer or your phone. I suggest you use:

- On computer: Sparrow Wallet
- On phone: Blue Wallet

These apps might be obsolete by the time you read these instructions. Regardless of the applications you choose, the process remains the same.

Whichever device and application you decide to use, be sure to get informed and train before you proceed with the Vault.

Procedure:

1. Download wallet management interface
2. Import existing wallet
3. Scan the QR Code present on the Wallet Descriptor item.

Congratulations - you've regenerated the Vault with the Wallet Descriptor.

In the interface, you'll now have access to the transactions made to and from the vault, the various amounts as well as the total balance present in the vault.

However, you won't be able to create outgoing transactions without signing them with the Signing Keys, on the offline signing device.

This is the subject of Guide 3.
