

Passphrase Envelope

In this RED envelope, you will find the Passphrase which, in combination with each Seed, will form the 5 Signing Keys from which your Bitcoin vault is derived.

Items list:

- Passphrase in 12 words on paper format
- Passphrase in 12 words on metal format

The 2 items represent the same information (Passphrase) on 2 different materials.

Unlike Seeds, the Passphrase does not have a Fingerprint, because although it has the same format as a Seed (12 words), it is not used as a Seed but as a "modifier" for each Seed.

In this Bitcoin vault, adding the Passphrase to the Seeds prevents the Seeds' guardians from collaborating and taking funds out of the vault without permission.

Without the Passphrase, it's impossible to sign transactions out of the safe. Only the owner and the heirs have access to the Passphrase.

WARNING:

Whoever has access to the Passphrase will have access to part of the Bitcoin vault. ALWAYS keep the Passphrase highly-confidential. NEVER share the Passphrase with anyone other than the vault owner or the heirs.

For this reason, the Passphrase must NEVER be loaded into any internet-connected device (computer or phone). It must ALWAYS remain disconnected and offline.

As a general rule, all handwritten information in the recovery packages is of the utmost sensitivity, and must be kept strictly confidential.
